

I have been trying to extract the QR Code from PDF using python. When first need to see weather QR Code available in the PDF or not.

**Below the Code been attached on it:**

```
import PyPDF2
from pyzbar import pyzbar
from PIL import Image

def has_qr_code(pdf_path):
    pdf_file = open(pdf_path, 'rb')
    pdf_reader = PyPDF2.PdfReader(pdf_file)

    for page in pdf_reader.pages:
        images = page.Extract_Image()
        for image in images:
            img = Image.fromarray(image)
            decoded = pyzbar.decode(img)
            if decoded:
                return True

    return False
```

```
# Example usage
pdf_path = r"C:\Users\TestData.PDF"
if has_qr_code(pdf_path):
    print("QR code found in the PDF.")
else:
    print("No QR code found in the PDF.")
```

On page.Extract Image getting Error : **AttributeError**: 'PageObject' object has no attribute 'Extract\_Image'  
Suggest !!
